

Finding Half and quarters.

Remember when you find half of an amount or object – you split it into 2 equal parts. They must be the same. You then choose 1 of the 2 parts.

When you find a quarter, you need to split into 4 equal parts and choose 1 of those 4.

Cut around the numicon below. Can you cut the numicon shapes in half, and can you cut it into quarters?

Stick it on a separate page so you can see what 1 half of 2 is, and what 1 quarter of 8 is, and so on.

Are there any numbers you struggle to find half or quarter of? Why do you think this?
